Recent advances in our understanding of the role of the mitochondrial fatty acid  $\beta$ -oxidation system, particularly fatty acid  $\beta$ -oxidation system in the liver, have paved the way for its use in the discovery of drugs. This area of drug discovery was reviewed and two new clinical trials were highlighted. A brief update is given on other areas of fatty acid oxidation research that are used in drug discovery today. The review is also illustrated with a commentary on the development and uses of in vitro methods for the analysis of fatty acid  $\beta$ -oxidation. This invention relates to an electronic repeater apparatus for use in telephone transmission lines, and more particularly to an electronic repeater apparatus for use in telephone transmission lines for transmitting and receiving data over the telephone lines through the use of an advanced data processing technique. In order to achieve high efficiency and highly reliable communications, time division multiplexing (TDM) has been widely adopted for use in a telephone transmission system. In such a system, data are transmitted by time-sharing frequency channels. The TDM telephone transmission system can be
